Re-allocation of address blocks

Ingrid Wijte
RIPE NCC

Re-allocation of resources

- Closure of LIR and de-registration of resources
  - http://www.ripe.net/ripe/docs/ripe-541
  - Non-payment / LIR terminating SSA
  - After closure de-registration starts
  - Ensure prefix no longer routed
  - Database objects deleted
- Quarantined
- Re-allocated

Quarantine practice

- Quarantine procedure: default three months
  - IPv4, IPv6, ASN
- Not uncommon for prefixes to be "tainted"
- Prefix becomes automatically available after quarantine
- Re-issued to (random) LIR / End User

Before reaching the last /8

- Quarantine period gradually reduced towards reaching last /8

- On 9 July, set to one month

- Last days: one week to one day

RIPE
NCC

After reaching the last /8

- Currently allocating from 185/8: /22

- Returned and de-registered prefixes quarantined: three months

- Re-allocated last (after 185/8)
